COMFORT

FAUTRAS TUCES  
EQUESTRIAN INNOVATIONS

*Jean-Luc Fautras, after many years in the equine world and having created many innovative designs in horse transportation, has now turned his thoughts to that of the horse's comfort and easy maintenance of their stables.*

## EASY TO USE

- > The Fautraself® allows you to store 2 to 3 days supply of hay, inside your stable (25 to 30 kg).
- > It is filled from the upper front door.
- > It can be installed and fixed in a stable corner or outside.
- > The smooth polyethylene is strong and easy to maintain.

## ECONOMICAL

- > Time is saved as hay only needs to be refilled very 2 to 3 days, not 2 or 3 times a day !
- > Your hay is now protected from your horse trampling therefore avoiding waste.

## COMFORT

- > The Fautraself® allows the horse to eat hay when it wants, in a natural position with its head down. Horses therefore eat more slowly, strand by strand, so no dust is breathed in and nasal secretions are expelled more easily, this helps your horse breathe normally.
- > The hay is reachable from the narrow openings on the lower part of the Fautraself®, slowing down the consumption and facilitating digestion.
- > By eating at will, the horse regulates its intake and is busy all day, which reduces the risks of colic, ulcers, stress...
